HEADMASTER® 7000 STAINLESS STEEL WET/DRY VACUUM

HEADMASTER® S-7000

HEADMASTER® 7000 STAINLESS STEEL WET/DRY VACUUM

Top-of-the-line professional features,
outstanding wet/dry recovery performance

When it comes to wet/dry recovery, the job doesn't always stop when the spill is recovered and the tank emptied. In health care and other applications, sanitation of the tank can be critical. An 18-gallon stainless steel tank is just one of several features that make the Headmaster S-7000 the perfect choice in meeting this challenge.

From a strong 2.1 power module to a tip-and-pour tank for convenient debris disposal, the S-7000 is engineered with features for the rigorous demands of everyday use. The unit comes standard with an impact sponge motor filter, wet filter, and dry filter. The sponge filter is a fail-safe filter for both wet and dry recovery. Among the unit's many professional features include a filter for wet applications that recognizes that solids are often encountered during wet recovery. The dry filter fits over the float cage frame for dry-only recovery applications. It should be removed in wet applications.

The S-7000 includes a built-in manometer filter gauge that tells the operator that the dry filter needs to be cleaned. The unit is factory-fitted with a power receptacle in the power module. A variety of optional attachments are available (see below) for the S-7000. The unit can also be fitted with an optional hospital motor impact filter for health care applications.

Headmaster® S-7000

Smart design

Because the hose intake is located in the power module, all filters stay attached to the power module, a plastic liner can be used for self-bagging of debris, and the intake deflector initiates cyclonic action that forces wet and dry debris alike down into the tank. The float provides vacuum automatic shut-off when the tank is full.

Easy debris disposal

The tip-and-pour function makes emptying the stainless tank hassle-free.

Convenience

The S-7000 has a built-in tool caddy for vac filters, attachments, spray bottles, and other cleaning supplies.

PRODUCT SPECIFICATIONS

MODEL	CATALOG NUMBER	VAC HP/CFM	WATERLIFT	STAINLESS STEEL TANK	WET/DRY CAPACITY	POWER CORD	SIZE (L X W X H)	WEIGHT
